PORTABLE (DRINKING) WATER SUPPLY

DESCRIPTION

The institution ensures the availability of safe, adequate, and hygienic potable (drinking) water for students, faculty, staff, and visitors within the campus. Purified drinking water is supplied through RO (Reverse Osmosis) water purification systems installed at various strategic locations such as academic blocks, administrative offices, hostels, library, laboratories, and common areas. The water purification units are regularly maintained and serviced to ensure water quality as per prescribed health and safety standards. Periodic cleaning, filter replacement, and quality checks are carried out to prevent contamination and ensure uninterrupted supply. The institution follows proper water management practices and ensures that drinking water points are easily accessible to all stakeholders. Adequate signage is displayed near drinking water facilities to promote awareness and hygienic usage. Thus, the institution provides a reliable and safe potable water supply system, contributing to the health, well-being, and comfort of the campus community.
