## ELECTRICAL GRID POWER SUPPLY CONNECTION

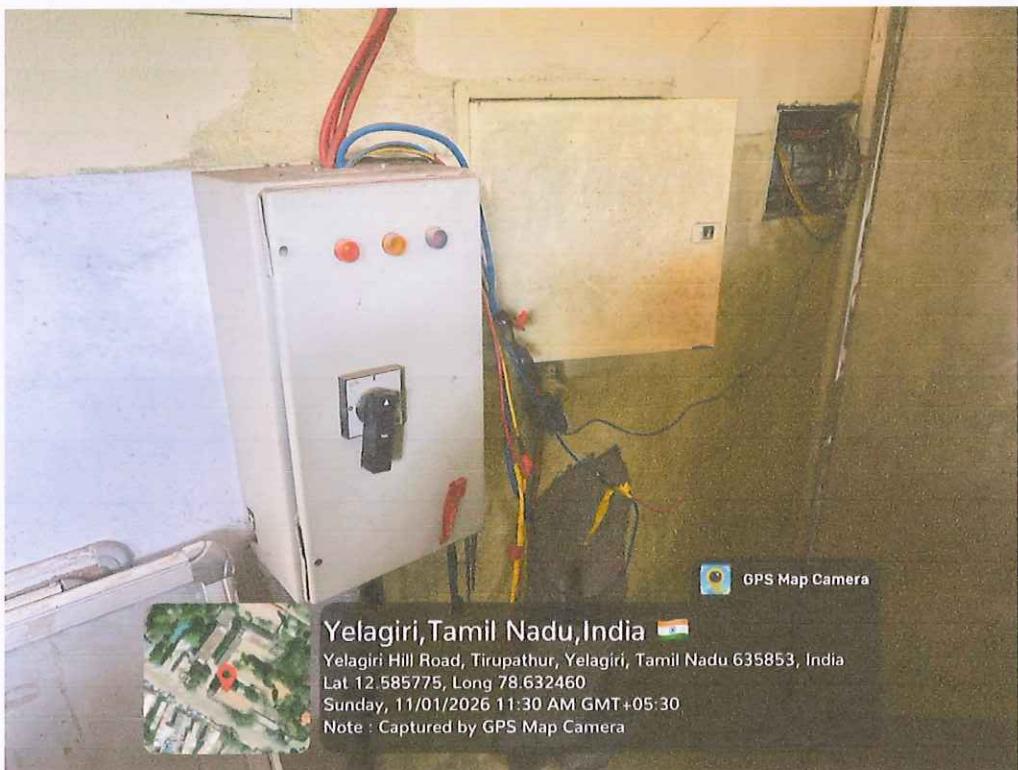

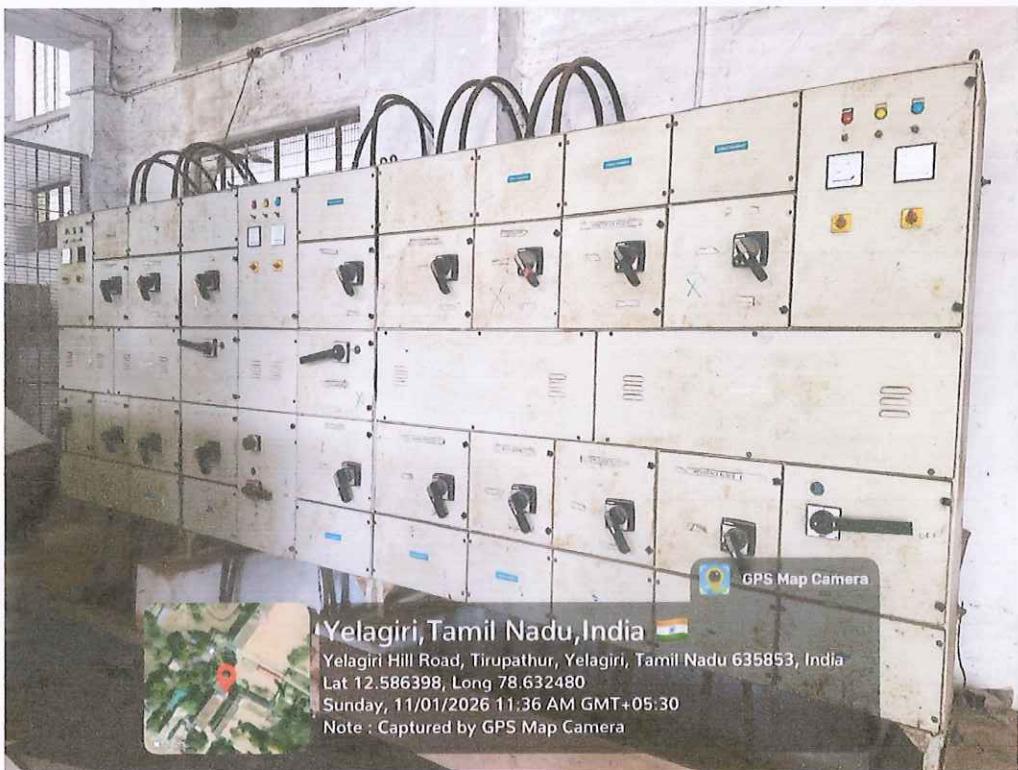

### DESCRIPTION

The institution is provided with a reliable electrical grid power supply connection from the State Electricity Board to meet the power requirements of the campus. The electrical supply is distributed to all academic blocks, administrative offices, laboratories, library, hostels, and other essential facilities through a well-planned internal electrical distribution system. Adequate electrical infrastructure, including transformers, control panels, circuit breakers, and safety devices, has been installed to ensure uninterrupted and safe power supply. Regular inspection and maintenance of electrical systems are carried out to prevent power failures and ensure compliance with electrical safety norms. The institution has implemented energy-efficient practices such as the use of LED lighting and power-saving equipment to optimize electricity consumption. Emergency backup power arrangements are also available to support critical operations during power outages. Thus, the institution ensures a stable and safe electrical grid power supply connection to support academic, administrative, and residential activities on the campus.
